September 25th

Hunter Hottest Sites

Eli's Work

From Last Week

- ☐ Work with the filtering/capturing code I found last weekend to create objects for each website on python and save time of packet in object's instance.
- ☒ Figure out what the role will be for some of us.
- ☒ Present, and learn from other presentations.
- ☐ Discuss where, when, and how to run Wireshark as a run test and see if the code will capture the data flawlessly.

Added Mid Week

- ☒ Get a Raspberry Pi.
- ☒ Make the packet capturing script work on the Raspberry Pi
- ☐ Add features to code (Get number of users that accessed site X given a time interval. This should help with the over counting obstacle...)

For next week

- ☐ Finalize script and leave it running for a day to find out what type of results we get.
- ☐ Talk to Library staff to find out if they can let us leave the device in one of their offices.
- ☐ Learn about the subnets at Hunter and find out on which subnet we get the most traffic from students.
